Wolfram Höland

Vice-chairman of TC04 of ICG, Ivoclar Vivadent AG, Head of department, Inorganic Chemistry, Technical Fundamentals, R&D, Benderstr.2 Li-9494 Liechtenstein, Principality of Liechtenstein

Richard K. Brow, Kathryn Goetschius, Delbert E. Day

Material Research Center, Missouri University of Science and Technology, Rolla, MO 65409, USA

Aldo R. Boccaccini, Alexander Hoppe

Department of Materials Science, University of Erlangen-Nürnberg, 91058 Erlangen, Germany

Chikara Ohtsuki, Ill Yong Kim

Graduate School of Engineering, Nagoya University, Furo-cho, Chikusa-ku, Nagoya 464-8603, Japan

Tadashi Kokubo

Department of Biomedical Sciences, College of Life and Health Sciences, Chubu University, Kasugai, Aichi, Japan

Akiyoshi Osaka

Graduate School of Natural Sciences and Technology, Okayama University, Tsushima, Okayama-shi 700-8530, Japan

Maria Vallet-Regí, Daniel Arcos, Leandro Fraile, Antonio J. Salinas

Departamento de Química Inorgánica y Bioinorgánica - Universidad Complutense de Madrid - 28040 Madrid -Spain and CIBER-BBN

Alexandra V. Teixeira, Yuliya Vueva, Rui M. Almeida

Departamento de Engenharia Química / ICEMS, Instituto Superior Técnico, Universidade de Lisboa, Portugal

Marta Miola, Chiara Vitale-Brovarone, Enrica Verné

Department of Applied Science and Technology Institute of Materials Physics and Engineering Biomaterials Laboratory, Politecnico di Torino, C.so Duca degli Abruzzi 24, Turin, Italy

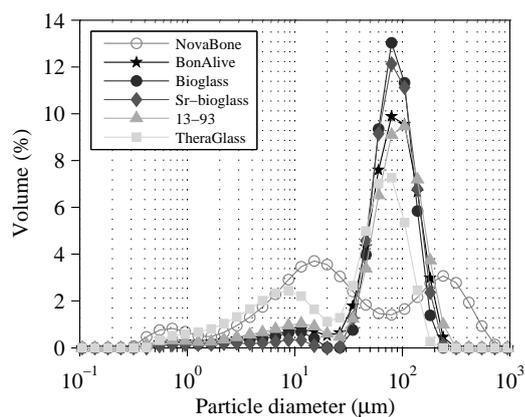

Fig. 1 Particle size distribution of the bioactive glasses tested

Table 1 Initial dissolution rate for silica, calcium and phosphorus obtained with the proposed ISO standard method and the TC04 method. Rate are given in $\mu\text{g}\cdot\text{ml}^{-1}\cdot\text{h}^{-1}$

Entry	Silica		Calcium		Phosphorus	
	TC04	ISO	TC04	ISO	TC04	ISO
Bioglass	6.9	0.9	9.3	0.1	-0.3	-0.4
NovaBone	7.3	0.1	7.2	-1.1	-0.3	-0.6
13-93	12.1	1.1	7.5	1.0	-2.0	-0.4
BonAlive	12.5	1.2	6.1	0.2	-3.7	-0.4
Sr-bioglass	7.6	1.3	7.4	0.3	-1.1	0.9
Theraglass	15.6	-	53.3	-	-6.1	-

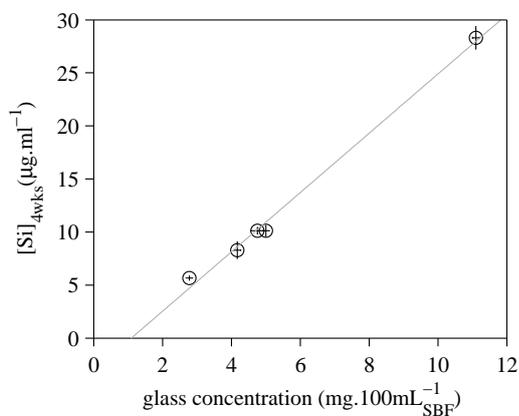

Fig. 2 Correlation between the concentration of glass used in the proposed ISO standard and the silica concentration at 4 weeks of immersion in SBF, $R^2=0.9946$.

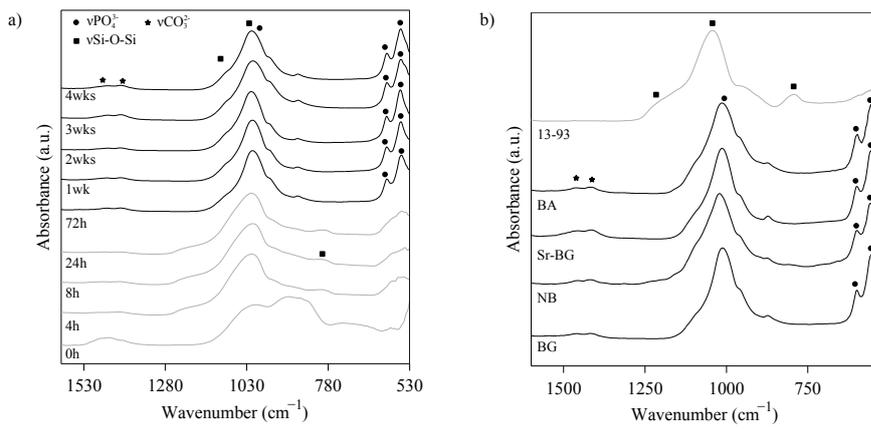

Fig. 3 FTIR spectra of a) Bioglass (BG, 45-90 μm) at every time point considered in the proposed ISO standard method and b) all the different glasses after 72h immersion in SBF, which is the time point at which P-O bends were detected for BG.
