Correction: Can BECCS deliver sustainable and resource efficient negative emissions?

Mathilde Fajardy\textsuperscript{ab} and Niall Mac Dowell\textsuperscript{*ab}

On page 1402, right column, lines 8–10, the sentence “Carbon efficiency can then be interpreted in terms of carbon negativity: systems whose carbon efficiency is over 50% are carbon negative” should read “Carbon efficiency can then be interpreted in terms of carbon negativity: systems whose carbon efficiency is over 0% are carbon negative”.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
