

## Supplementary Information File

Comparative systematic review and meta-analysis of reactogenicity, immunogenicity and efficacy of  
vaccines against SARS-CoV-2

Ian McDonald<sup>1</sup>, Sam M Murray<sup>1</sup>, Catherine J Reynolds<sup>1</sup>, Daniel M Altmann<sup>2\*</sup> and

Supplementary Figure 1: Heat map and table showing countries where HCoV pre-clinical and clinical studies were conducted

Supplementary Figure 2: Percent of Grade 3 adverse events (AE) recorded in human trials

Supplementary Figure 3: Human (n=25) and NHP (n=23) studies; comparative analysis of immunological readouts

Supplementary Table 1: Database Search Strategy: Search terms, phrases and limits related to HCoV vaccine research used in accordance with PRISMA guidelines

Supplementary Table 2: Inclusion and exclusion criteria

Supplementary Table 3: Characteristics of the human studies

Supplementary Table 4: Characteristics of the NHP studies

Supplementary Table 5. Summary of vaccine studies in NHP

Supplementary Table 6: Demographic characteristics of the human studies

Supplementary Table 7: Vaccine efficacy against COVID-19

Supplementary Table 8: NHP safety analysis

Supplementary Table 9. Interstudy analysis of individual local adverse events reported in vaccine group (excluding control group) of coronavirus vaccine studies.

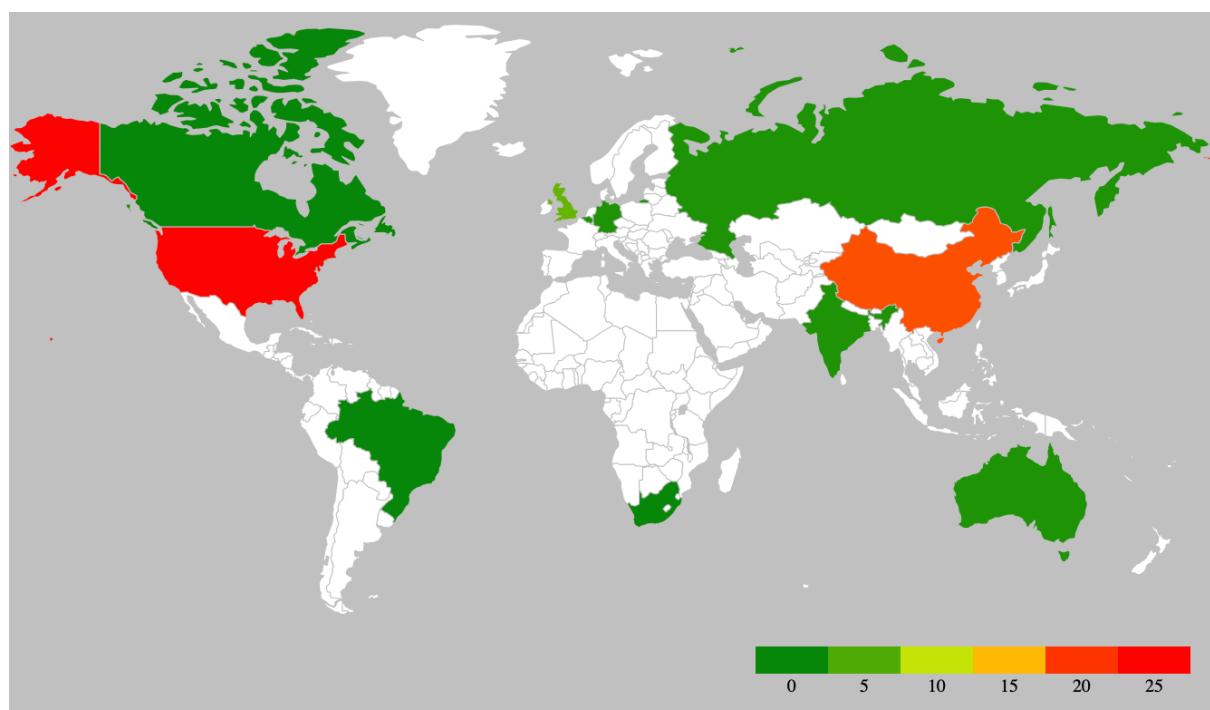

Supplementary Table 10: Interstudy analysis of individual systematic adverse events reported in vaccine group (excluding control group) of coronavirus vaccine studies.

Supplementary Table 11: Serious adverse events

Supplementary Table 12: Pre-existing anti-vector neutralising antibody titers recorded before vaccination and their correlation with anti-RBD seroconversion or SARS-CoV-2 neutralization in adenoviral vectored SARS-CoV-2 vaccines

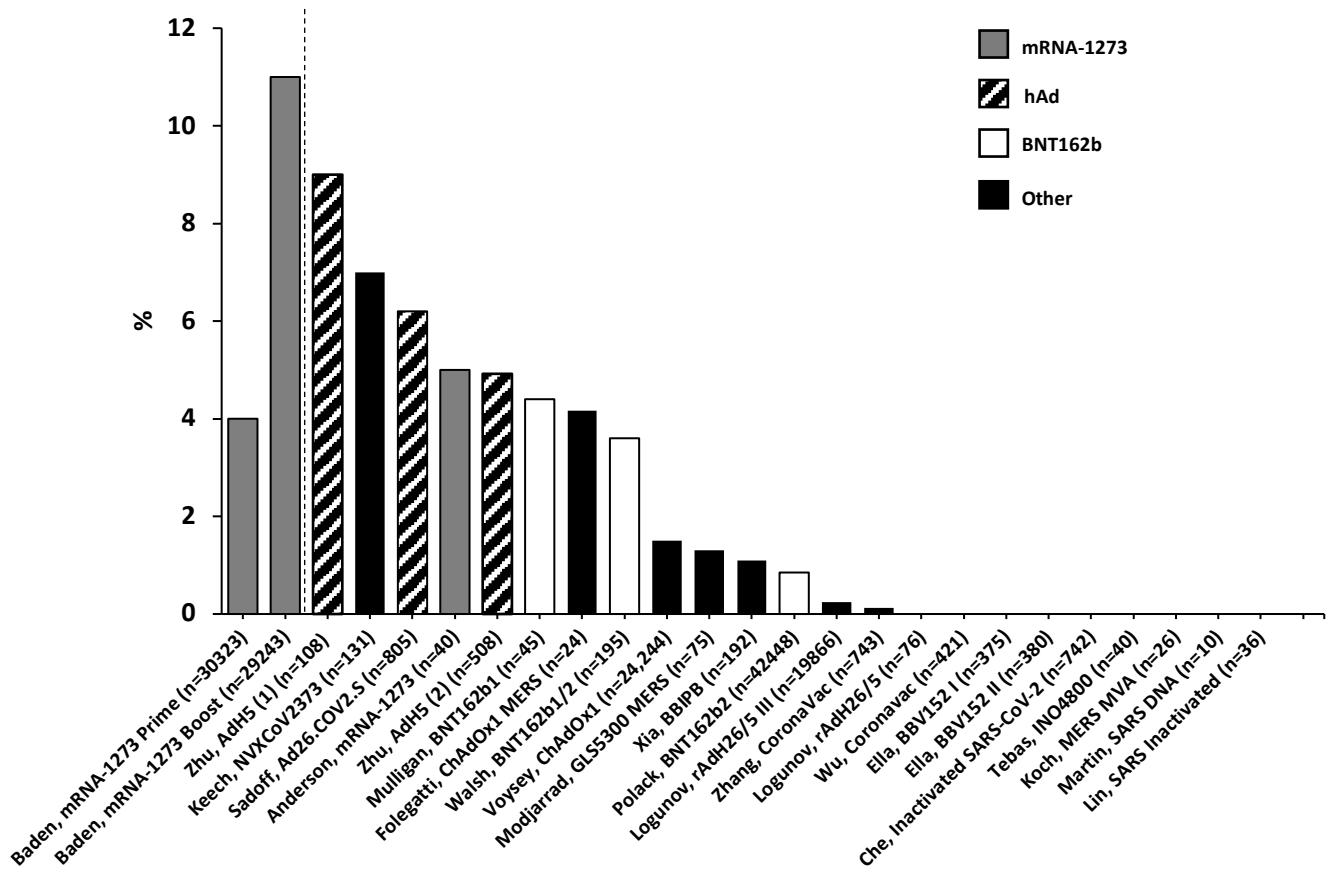

Supplementary Table 13. Human and NHP T cell analysis

Supplementary Figure 1: Heat map and table showing countries where HCoV pre-clinical and clinical studies were conducted

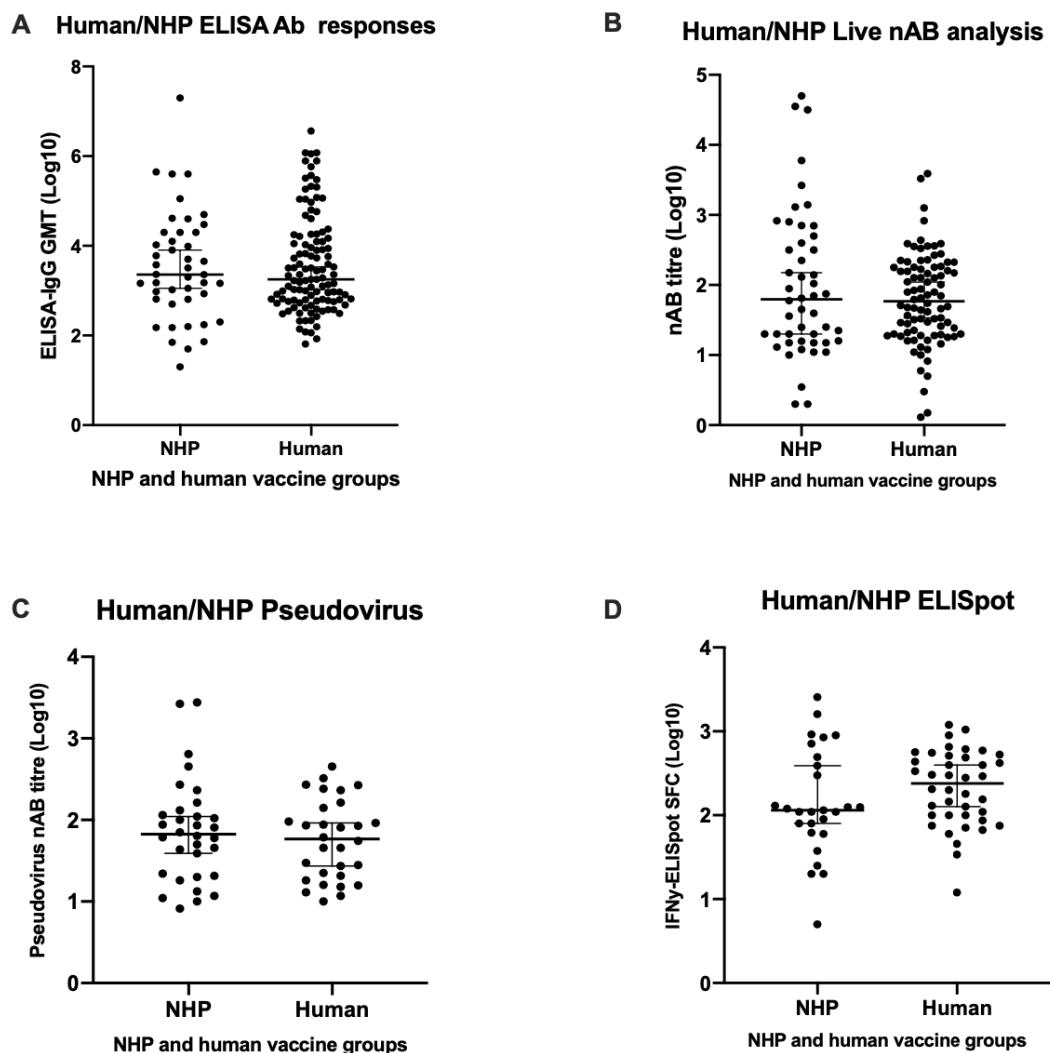

Country	Number
United States	21
China	18
United Kingdom	5
Belgium	2
Germany	2
India	2
Australia	2
Russia	2
Canada	1
Brazil	1
South Africa	1

Supplementary Figure 2. Percent of Grade 3 adverse events (AE) recorded in human trials. Grade 3 AE in both experimental and placebo groups are included in this analysis. First author, vaccine platform and number of participants in each study shown on the x-axis. Zhu, AdH5 (1): AdH5-SARS-CoV-2 phase 1 trial, Zhu, AdH5 (2): AdH5-SARS-CoV-2 phase 2 trial, Folegatti, ChAdOx1 (1): ChAdOx-MERS.

Supplementary Figure 3. Human (n=25) and NHP (n=23) studies; comparative analysis of immunological readouts: (A) ELISA-IgG, (B) Live neutralization antibody assay, (C) Pseudovirus neutralization antibody assay, (D) ELISpot T cell responses. Data are log transformed. Unpaired t-test of independence used to evaluate the statistical difference between human and NHP vaccine group responses (p<0.05 was taken to indicate a significant difference)

Supplementary Table 1: Database Search Strategy: Search terms, phrases and limits related to HCoV vaccine research used in accordance with PRISMA guidelines.

Data base	Search strategy
PUBMED	(Coronavirus) OR ("sars"[All Fields]) OR ("middle east respiratory syndrome"[All Fields]) OR ("sars"[Title/Abstract]) OR ("mers"[Title/Abstract])) AND (Vaccin*)) NOT (Review[Publication Type]) [Filter – Year of Publication – 2003-2021]
EMBASE	(coronaviridae OR 'severe acute respiratory syndrome' OR 'middle east respiratory syndrome coronavirus' OR 'sars' OR 'mers') AND (vaccin*) [Filter – Year of Publication – 2003-2021]

Supplementary Table 2: Inclusion and exclusion criteria

Inclusion Criteria

- Any study evaluating the safety, immunogenicity or efficacy of a coronavirus vaccine candidate in NHP or humans

Exclusion Criteria

- *In vitro* studies
- Other animal models
- Reviews, editorials, conference proceedings
- Unrelated to coronavirus vaccine development
- Duplicates

Note on exclusion of Pre-Prints from this analysis

- We have only included peer reviewed data in this analysis

Supplementary Table 3: Characteristics of the human studies

Study ID Location Ref No	Study Design, Length, Population (N), Age	Pathogen	Vaccine Platform	Antigen Insert	Group + Doses, Boosting, Route of Administration,	Measure of Ab Response	Measure of Cellular Response + Days
Ella et al, (16) 2021 India	Safety, immunogenicity Phase 1 double-blind, multi-center, randomized, placebo-controlled N=375 18-55y/o	SARS-CoV-2	BBV152	Inactivated whole virion	3ug with Algel-IMDG (N=100) 6ug with Algel-IMDG (N=100) 6ug with Algel (N=100) Placebo= Algel only (N=75) Boosted D14 IM	ELISA-IgG D0, 28 <b>Microneutralization assay</b> (MNT <sub>50</sub> ) D0, D28 <b>Plaque-reduction neutralization test</b> (PRNT50)	ICS D0, 28 <b>IFNγ ELISpot</b> D0, 28
Richmond et al, (17) 2021 Australia	Safety, immunogenicity Phase 1, randomized, double-blind placebo-controlled N=151 18-54, 55-75y/o	SARS-CoV-2	S-Trimer (SCB-2019)	Trimer-Tag fused trimerized S protein	3ug w/o Adjuvant n=8 3ug AS03 N=16 3ug CpG/Alum N=16 9ug w/o Adjuvant N=8 9ug AS03 N=16 9ug CpG/Alum N=16 30ug w/o Adjuvant N=9 30ug AS03 N=16 30ug CpG/Alum N=16 Placebo N=30 All boosted D21 IM	ELISA-IgG D1,D22,D36,D50 <b>ACE2-Competitive ELISA</b> D1,D22,D36,D50 <b>Authentic WT</b> <b>Neutralization</b> D1,D22,D36,D50	ICS D1,D22,D36,D50

**SARS-CoV-2: Severe acute respiratory syndrome coronavirus 2, MERS-CoV: Middle east respiratory syndrome, SARS-CoV-1: Severe acute respiratory syndrome coronavirus 1, Ab: Antibody, nAb: Neutralising antibody, ADE: Antibody dependent enhancement, CoP: Correlate of protection, ab: Antibody, nAb: Neutralising antibody, GP: Glycoprotein, IM: Intramuscular, IN: Intranasal, DNA: Deoxyribonucleic acid Vp: Virus particle, TCID<sub>50</sub>: 50% tissue culture infective dose, S: Full length spike protein, S.dCT: Spike protein with a deletion of cytoplasmatic tail, S.dTM: Spike protein with a deletion of transmembrane domain and cytoplasmic tail reflecting the soluble ectodomain, S1: S1 domain with a foldon trimerization tag, RBD: Receptor binding domain, S.dTM.PP: soluble ectodomain with a deleted furin cleavage site, with proline mutations and a foldon trimerization tag, ELISA: Enzyme-linked immunosorbent assay, IgG/A: Immunoglobulin G/A, IFN $\gamma$ : Interferon gamma, ELISpot: Enzyme-linked immunospot, ICS: Intracellular staining, RT-PCR: Reverse transcription polymerase chain reaction, ChAdOx1: Replication-deficient simian adenovirus vector oxford 1, HEK293T: Human embryonic kidney 293 cells, AdH26:Recombinant human adenovirus-26, S.PP: Wild type leader sequence with full-length S GP with a mutation of the furin cleavage site and proline stabilizing mutations, tPA.S: Leader sequence with full length S, tPA.S.PP: Tissue plasminogen with full-length S with mutations of the furin cleavage site and two proline stabilization mutations, tPA.WT.S: Tandem tPA and wild type leader sequences with full-length S, sgRNA: Subgenomic ribonucleic acid, MLV: Murine Leukaemia virus, ND: Not defined, LNP: Lipid nanoparticle, S2-P: SARS-CoV-2 GP with a transmembrane anchor and intact S1-S2 cleavage site, PBS: Phosphate-buffered saline, AdH5: Human adenovirus vector 5, AdC7: Chimpanzee adenovirus 7, ORF: Open reading frame, PRNT: Plaque reduction neutralisation assay, ug: Microgram, IL-4: Interleukin 4, MVA: Recombinant modified Vaccinia virus Ankara, IT: Intratracheal, rVSV: Recombinant vesicular stomatitis virus, FFU: Focus forming units, E: Envelope protein, M: Membrane protein , VLP: Virus-Like Particle, RBD: Receptor binding domain, S1: Spike GP domain 1, Huh-7.5: hepatocyte derived cellular carcinoma cell line.**

Supplementary Table 5. Vaccine studies in NHP

Candidate and Pathogen	Vaccine Platform	Description	Human	NHP
Unnamed DNA plasmid vaccine MERS-CoV (64)	DNA Plasmid	DNA plasmid expressing full-length spike or truncated S1 protein genes		✓
Unnamed DNA Vaccine SARS-CoV-2 (55)	DNA	DNA vaccine encoding multiple optimized variations of the spike protein gene		✓
repRNA-CoV2S SARS-CoV-2 (59)	RNA	Alphavirus derived replicating RNA vaccine expressing full-length spike protein gene in an inorganic lipid nanoparticle emulsion		✓
Unnamed DNA plasmid vaccine MERS-CoV (65)	DNA Plasmid	DNA plasmid expressing full-length consensus spike protein		✓
Unnamed adenovirus vaccine SARS-CoV-1 (66)	AdH5/AdC7	Human Adenovirus 5 and Chimpanzee adenovirus 7 vaccine regimen expressing spike protein		✓
Unnamed inactivated virus vaccine SARS-CoV-1 (67)	Inactivated Virus (BJ-01 strain)	β-propiolactone Inactivated vaccine		✓
Unnamed inactivated virus vaccine SARS-CoV-1 (69)	Inactivated Virus (NS-1 strain)	Formaldehyde inactivated vaccine		✓
S1-Fc fusion SARS-CoV-2 (54)	Recombinant Protein	CHO-expressed S1-Fc fusion protein with CFA, AD11.10 and AD20GOLD adjuvants		✓
ARCoV SARS-CoV-2 (50)	mRNA	mRNA vaccine encoding the RBD, encapsulated in a lipid nanoparticle.		✓
rRBD-MERS-CoV MERS-CoV (63)	Recombinant subunit	Recombinant receptor binding domain protein vaccine administered with Alum adjuvant		✓
YF-S SARS-CoV-2 (48)	Live-attenuated yellow fever virus	Yellow fever 17D: Single stranded, live attenuated virus vaccine		✓
Unnamed live-attenuated vaccine SARS-CoV-1 (70)	Live attenuated Parainfluenza virus	Attenuated Parainfluenza virus vaccine expressing full length spike protein		✓
Ad5-S-nb2 SARS-CoV-2 (52)	AdH5	Replication deficient adenovirus 5 vectored vaccine expressing codon optimized full-length spike protein.		✓
Unnamed live-attenuated vaccine SARS-CoV-1 (68)	rMVA	Live-attenuated Modified Vaccinia Ankara (Poxvirus) expressing full-length spike protein		✓
VSVΔG-MERS MERS-CoV (61)	VSV	Vesicular stomatitis virus encoding the MERS-CoV S gene		✓
MERS-CoV-VLP (62)	VLP	Recombinant Baculovirus expressing the spike, envelope and membrane genes		✓

Supplementary Table 12: Pre-existing anti-vector neutralizing antibody titers recorded before vaccination and their correlation with anti-RBD seroconversion or SARS-CoV-2 neutralization in adenoviral vectored SARS-CoV-2 vaccines. n= number of patients with pre-existing neutralizing antibody titer available.

Vaccine group	n	No. participants with nAb titer = 0	No. participants with nAb titer $0 < N \leq 200$	No. participants with $> 200$ nAb titer	Regression analysis: Vector nAb: Anti-RBD/SARS-CoV-2 nAb.	Summary
Zhu, AdH5 (Phase 1) Low dose (39)	36	NA	16(44%)	20(56%)	-1.67 (p=0.0003)	High levels of AdH5 nAbs at baseline. Significantly less nAb after vaccination in those with pre-existing AdH5 nAb.
Zhu, AdH5 (Phase 1) Middle dose (39)	36	NA	17(47%)	19(53%)		
Zhu, AdH5 (Phase 1) High dose (39)	36	NA	20(56%)	16(44%)		
Zhu, AdH5 (Phase 2) Low dose (40)	129	NA	54(42%)	75(58%)	-1.24 (p<0.0001)	High pre-existing AdH5 neutralizing antibody titer associated with reduced antibody responses, especially in those 55 years and older.
Zhu, AdH5 (Phase 2) High dose (40)	253	NA	127(50%)	126(50%)		
Folegatti, ChAdOx (Phase 2) (41)	98	79(81%)	18(18%)	1(1%)	No relationship	No association between pre-existing antibodies to the ChAdOx vector and antibody responses to SARS-CoV-2.
Logunov AdH26/5-Vac rAd26 (35)	38	32(84%)	3(8%)	3(8%)	0.07 (p=0.77)	No significant correlation between nAb titers to the adenoviral vector and the titer of RBD-specific IgG. No nAb cross reactivity between AdH5 and AdH26 adenoviral vectors.
Logunov AdH26/5-Vac rAd5 (35)	38	27(81%)	6(16%)	5(13%)	-0.2 (p=0.39)	
Logunov AdH26/5-Lyo rAd26 (35)	38	31(82%)	5(13%)	2(5%)	-0.44 (p=0.06)	
Logunov AdH26/5-Vac rAd5 (35)	38	29(76%)	5(13%)	4(11%)	-0.44 (p=0.06)	
Ramasamy ChAdOx (28)	552	522(100%)	0	0	NA	Anti-ChAdOx nAb titer increased following prime vaccination. No increase after boosting. Small negative correlation between Anti-ChAdOx nAb titre before boosting and anti-Spike IgG titer after boosting.
Sadoff rAd26.COV2.S (23)	303	303(99.4%)	2(0.6%)	0	-0.13 (NS)	No significant relationship between pre-existing neutralizing antibody titer and SARS-CoV-2 nAb induction. No relationship apparent after boost.

Supplementary Table 13. Human and NHP T cell analysis. \*data from trial was estimated using graphical representations, \*\*responses too low to extract.
